

To all subscribers and prospective subscribers of the GATS

PJM-EIS has decided to delay the initial creation of GATS certificates by one week. The initial run of certificates will occur on October 7th. This will give all subscribers an additional week for account set up and to register generators in the system. Certificates will be created on October 7, 2005 for all of 2005 up through and including August. **All PJM Generators that want to have certificates created for this period must subscribe and register their generators in the GATS prior to October 6, 2005.** PJM-EIS would prefer that generators register as soon as possible.

Please do not miss this opportunity to register your generators if you want certificates created for this period. PJM generators that are not registered by October 6, 2005 will not receive any certificates for the first eight months of the year. Any generator that registers after October 6th will have certificates created for the current monthly cycle in effect for the month in which they register. The certificate creation cycle for September production will begin on Monday October 10th.
