Generation Attribute Tracking System (GATS)
Operating Rules
Changes in Rev 1 dated June 30, 2005

Presented at the

GATS Subscriber Group Meeting

July 7, 2005

- **General** – Made miscellaneous corrections based on comments received after the April 15th Subscriber Group Meeting
- **Section 2** – Definition of Terms
  - Modified definition of Billable State, Certificate(s), and Retail LSE Subaccount
  - Added definitions for Emission Protocol, Retail Load Serving Entity, and Voluntary Market
- **Section 6.5** – Added paragraph 6 describing use of an approved Emissions Protocol for Multi-fuel Generation Units
- **Section 8 and Appendix C** – added capability for the GATS Administrator to retroactively update eligibility for state programs on certificates created during the current trading period, upon request by an authorized state agency

- **Section 9.2** – added capability to allow Standing Orders to be defined for a fixed period of time and irrevocable by the Transferor (similar to Forward Certificate Transfer functionality in NEPOOL GIS).
- **Appendix A** – updated Comparison of RPS Programs in PJM States
- **Appendix C** – Generator Static Data Fields
  - additional fields changed to be required
  - updated Fuel Types table
- **Appendix F** – deleted two Administrator reports:
  - Serving LSE report
  - Delinquent Unit Exports report
- **Appendix G** – Added state agencies in North Carolina (due to integration of Dominion on May 1)
